Other Site Characteristics

Desde el punto de vista morfo genético, destacan las formas de origen fluvio-coluvial, generadas por

procesos de erosión-acumulación causados por la red hidrográfica, dando lugar a morfologías muy características en las que predominan las llanuras y planos inclinados. Las fisiografías de vegas y llanuras de inundación, vinculadas a los cursos de los ríos y arroyos, son las más representativas. También es importante el sistema morfogenético denudativo (colinas y cerros sobre triás con yesos).
